Dear Hiring Manager,

I'm excited to apply for the Junior Software Developer position. With a background in both backend and frontend development, combined with hands-on experience in IT support, I am confident in my ability to contribute to your development team and deliver quality software solutions that enhance internal operations and customer experience.

In my recent role as an ICT Intern at the Kenya Medical Research Institute (KEMRI), I contributed to software development projects, including building a SaaS module that reduced data processing workload for researchers. I've worked with technologies such as JavaScript, PHP, and React, and have growing experience with C# and SQL-based databases like MySQL and PostgreSQL. I also regularly use Git for version control and collaboration.

I write clean, maintainable code, and I enjoy working in agile teams where code reviews, documentation, and continuous improvement are the norm. I'm someone who requires little supervision, pays attention to detail, and always aims to reduce workload by building tools and features that make systems more efficient and reliable.

I'm excited by the opportunity to learn from your team, contribute to impactful projects, and grow into a stronger developer. Thank you for considering my application—I'd welcome the opportunity to further discuss how I can support your software development efforts.

Best regards,

**Benayah Wanyoike**
